

## ***Bay Shrimp***

### **INVERTEBRATE**

*Crangon nigricauda*

*diet: amphipods (shrimp-like scavengers)*

*size: 6 cm (2.5 in)*

*Habitat: Buried in sand - Find these shrimp buried in shallow sand around the outer edges of the tide pools all around the Rock. On occasion, during a sunny day look for juveniles at the surface - seen as shadows racing through water. Most shrimp have a parasite attached to the upper body.*

*Pictured above being consumed by aggregating anemone.*

***Fun Fact: Females carry eggs under their abdomen.***
